Object: NXP MIFARE Security Evaluation of Sm@rtSIM CX ARIES_Baseline product / **ARN-2018-004**
N/R: [2018-05/ITS/LET/17]

Dear Sirs,

Regarding the test conclusions provided by LGAI Technological Center S.A. (Aplus+ Evaluation Laboratories) in Security Evaluation Report Lite (MIFGAD001, version M0 issued 08/05/2018) for which the Sm@rtSIM CX ARIES_Baseline product, embedding MIFARE DESFire EV1, is assessed resistant to a “High” attack potential.

SERMA SAFETY & SECURITY ITSEF (CA Lab) agrees with the tests performed and the conclusion provided by UL Transaction Security (Evaluation Lab) regarding the vulnerability analysis conclusions of your Sm@rtSIM CX ARIES_Baseline product, which did not highlights exploitable vulnerability.

Therefore, I am pleased to inform you that SERMA SAFETY & SECURITY ITSEF (CA Lab) confirms that: **Sm@rtSIM CX ARIES_Baseline product, embedding MIFARE DESFire EV1, ‘Pass’ to the targeted NXP MIFARE Security Evaluation.**

Stephane LEBRUN
SERMA ITSEF Project Leader
